August 21-22

Lighthouse Tour

Ludington, MI

Regarding this season's Lighthouse Tour, Steve and Mary Jane Gould graciously have been doing research for a tour on the west side of the state. Steve wanted to know everyone's level of interest of certain areas along the coast to determine where to start and finish, and what areas we may want to avoid (e.g., Petosky and Traverse City due to heavy vacation traffic). After a good discussion, it was agreed to make our starting point in Ludington. The thought is for all to depart their homes on Thursday, August 21 in order to meet at a certain time in Ludington to visit the Ludington North Breakwater lighthouse. There is about a 1½ mile walk down the pier to see the lighthouse up close and if you wish, climb it for \$8 per adult. After that, we would drive up the coast to Manistee where we would be spending the night at the new Hampton Inn on the beach. Steve will look into getting a block of rooms there for our group. On Friday, August 22, we would continue up the coast to visit a couple more lighthouses as time permits. Then, travel across the top of the mitten toward Mackinaw City. Steve and Mary Jane will have a more complete itinerary in the coming weeks.

August 23

Corvette Crossroads

Mackinaw City, MI

Pre-registration required www.mackinawchamber.com

Note: Rivera Motel is sold out (previously the motel of choice)

Options: Lighthouse View Motel, 699 North Huron Ave. (231-216-3035)

American Boutique Inn, 517 North Huron Ave (231-322-7579)

July 26	Corvettes America Show	Clarkston, MI
August 3	Troy Traffic Jam	Columbia Center, Troy, MI
August 13	Corvette Flag Display	M1 Concourse > see page 4

An invitation to all SACC members whether or not you are members of SACC Michigan Chapter:

The Michigan Chapter is continuing the series of weekend Lighthouse Tours.

There are **129 Lighthouses**; as you know, we are not short of destinations. Just your interest to drive...

The tours allow SACC Members to join us for a day or two when they (or their car) are comfortable. See page for Lighthouse map of Michigan.

Michigan Lighthouse Tour #4 will be a 3-4 day road tour beginning in Ludington/Manistee with Corvette Crossroads in Mackinaw City as the destination as described below.

Our tentative plan is for everyone to meet at 3:00 pm in Ludington on Thursday, August 21st, at Steans Park on the beach in Ludington. The Ludington's North Breakwater Light (pg. 7) is across the sand and at the end of the breakwater. Lots of parking there. After an hour or so there (and we have everyone!) we are going to proceed to Manistee (35 mi/30 minutes) to the Hampton Inn-Beachfront (**101 S Lakeshore Dr. Manistee, 231-299-1096, Group Code : C-ACC**) After checking in there, we will meet for dinner TBD, or have Hampton Inn set up for us in their upstairs restaurant. We can watch the sunset from that restaurant, or in the bar downstairs.

Friday, we are going to tour 3 lighthouses going north to Empire: 1) The North Pierhead Light (pg. 7) in Manistee. 2) the North Breakwater Light in Frankfort (pg. 8) (Both are at the end of a pier across the beach). Then onward to 3) the Point Betsie Lighthouse (pg. 8) This one is on land and has facilities.

This route will take us through Manistee, then along Lakeshore Drive onto M22. From there through Onkama and Arcadia on M22. The goal would be to end up in Empire around noon or 1:00pm, and have box lunches (which we can pick up locally) at the Empire City Park looking towards Sleeping Bear Dunes.

That's it for the lighthouses!

Then we deadhead East on US131 almost up to Petosky, and then take the back roads around Petosky (River Road, I think), and then over to the old Mackinaw Trail, and into Mackinaw City. This path has a lot of twists and turns, but allows us to avoid downtown Petosky. It is not fastest. This portion of the tour is realistically 3+ hours of driving, approx. 140 miles.

Continued on page 4

For those who chose to drive to West Michigan a day earlier and arrive on Wednesday, 8/20, there are a couple of scenarios you might want to consider:

- 1) Drive to Ludington, and stay in Ludington. Lots of chain hotels in Ludington. Pick one you like or have points for. There is a beachfront hotel adjacent from Stearns Park: Snyders Shoreline Inn. Lakeview rooms there are \$224/night. It's a classic old-school up-north motel.
- 2) Or drive to Manistee, and stay at the Hampton Inn. That way you can unpack once for a two-night stay. This is a very nice hotel!

Depending on interest, we can organize group rides and dinners for Wednesday night, and Thursday till the rest of the group gets here Thursday afternoon. Options include:

- 1) Drive out through the sand dunes to Ludington State Park, and take the 1.5 mile walk to Big Sable Point Lighthouse. Or, if that's too much walking, instead, tour this spectacular State Park. (State Park endorsement, or Day-Use fee required.)
- 2) Watch the famous SS badger (car ferry) come into Ludington Harbor at 6:15 pm or so. This is always a spectacle.
- 3) Other local tours.

The distance between Manistee and Ludington is a leisurely and picturesque 35 minute/30 Mile drive, and both cities are equidistant from SE Michigan in driving time and miles. So, do what you want to do! If you do plan to come early, please announce your intention.

Steve and Mary Jane have offered local guidance, and would be happy to coordinate the early-arrivers' activities.

(stevegould@outlook.com 616-292-4929)

For additional see pages 6-9.

Don't forget our website: www.solidaxlecorvettemi.com

For those who may not have attended Corvettes Crossroads in Mackinaw City:

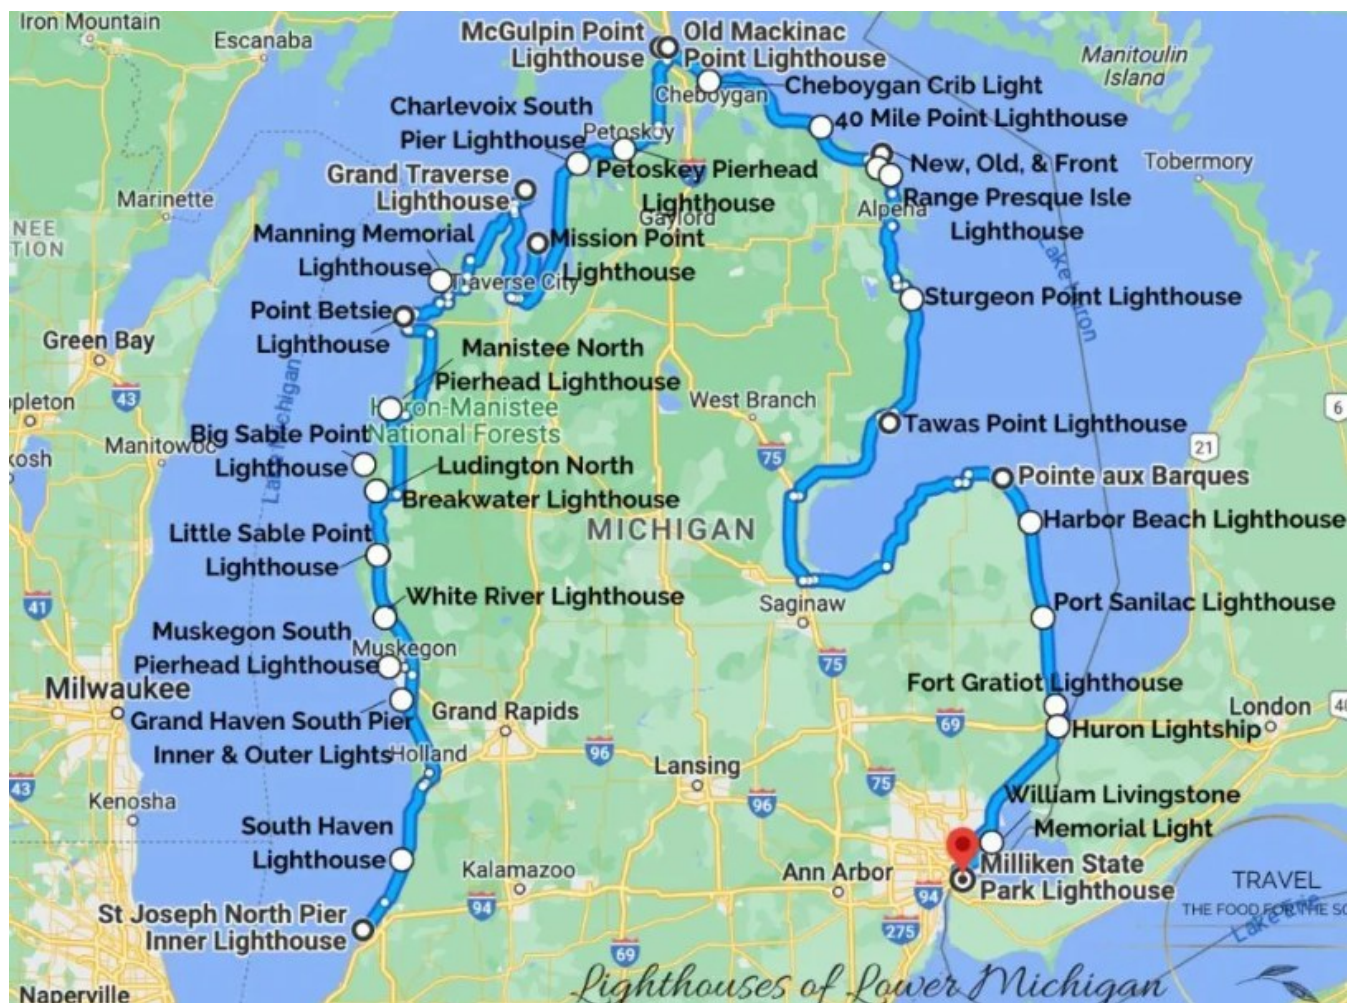

Corvette Crossroads show is Saturday followed at 7:00 pm by the Mackinac Bridge Parade—36th Annuals

Registration and information is available on www.mackinawchamber.com

Sunday is a day of rest, site seeing, a trip to Mackinac Island, or returning home or staying the night.

Monday when the traffic on I-75 is much less is best for returning south

This requires three nights in Mackinaw City. So plan ahead.

Michigan

Lighthouse Tour

58 Ludington North Breakwater

The S.S. Badger waiting to dock at Ludington, Michigan, passing the Ludington North Breakwater Light. © Scott B. Reed Photo Photography

Ludington's North Breakwater Light has been ranked as the #1 lighthouse to visit in Michigan. This iconic lighthouse, located at the end of Ludington Avenue, is accessible from Stearns Park. It's a focal point within the community, and a great place to watch the sunset! Visitors and locals enjoy walking the long outer break wall (a mile-long round trip) leading out to the light. This location provides a close look at the S.S. Badger ~~car ferry~~ as it cruises from its home port to cross Lake Michigan, from Ludington to Manitowoc, and back. During open hours, visitors can climb the 53

steps to the top of the North Breakwater Light.

Hours: Tuesday-Sunday, 10am-5pm May 23-September 3, 2023.

Manistee's North Pierhead Lighthouse

A view of the Manistee North Pierhead Lighthouse. © Scott B. Reed Photo Photography

The most symbolic icon of the Victorian Port City is the **North Pierhead Lighthouse**, located between the 1st Street and 5th Avenue beaches of Manistee. Many Michigan lighthouses demolished their catwalks when the lights became electrified, so Manistee's catwalk is a rare sight. In the late 1920s, after extensive pier renovations, the old fog signal building was replaced by the present structure. Standing watch over Lake Michigan waters, Manistee's North Pierhead Lighthouse welcomes boaters into its harbor, and is a reminder of Manistee's great maritime history.

Michigan Lighthouse Tour

Frankfort North Breakwater Light

A visit to the charming city of Frankfort in Benzie County wouldn't be complete without a trip to the Frankfort North Breakwater Light. The current light was constructed in 1912 and placed on the National Register of Historic Places in 2005. Standing 44 feet tall, the light is placed on top of a 25-foot-tall square steel base. The cast iron lantern room, which is surrounded by a gallery, originally contained a fifth order Fresnel lens that was upgraded to a fourth order Fresnel lens. Located on the west side of downtown Frankfort, you can walk the breakwater out to the lighthouse, and fish off the pier.

POINT BETSIE LIGHTHOUSE

feet tall, but with the height of the dune it towers 52 feet above the water line. Point Betsie was the last lighthouse on the Great Lakes to be manually serviced and was fully automated in 1983. The light could originally be spotted as far away as 27.5 miles with the Fourth Order Fresnel Lens it came equipped with. Upon automation the Fresnel Lens was replaced with a Vega VRB-25 system, which has a range of 15-22 miles. Today Point Betsie stands in quiet testimony to the many keepers who maintained the light while their wives maintained the household, tended gardens, and watched their children playfully explore the dunes. Listed on the National Register of Historic Places, and manned for 106 years, Point Betsie offers a fascinating visit to history buffs and those who just want to relax. Sporting the same paint scheme the lighthouse had in the 1940s, it has been preserved and is cared for by "The Friends of Point Betsie Lighthouse". If visiting Frankfort, or Sleeping Bear Dunes in Benzie County, make sure to visit this historic lighthouse. Wander the grounds, explore the accompanying fog station, stroll the beach, or have a family picnic.

MICHIGAN LIGHTHOUSES

Lighthouses and navigation lights circle the Great Lakes. This map shows only lights in Michigan.

Dangerous counterfeit auto parts pour into U.S. in growing numbers

U.S Customs and Border Protection seized more than 211,000 counterfeit auto parts in fiscal year 2024, up from the prior year.

Every part of your vehicle could be counterfeited. A counterfeit part could cause performance issues or, worse, even be fatal.

"Counterfeit parts are more than just a failure in quality: They are a direct risk to safety, where shortcuts in integrity can threaten lives," said Bob Stewart, president of the [Automotive Anti-Counterfeiting Council](#), an alliance of nearly a dozen North American vehicle manufacturers. The group indicated it's not possible to know how many vehicles on the road contain counterfeit parts. But the increasing circulation of these parts is a growing concern among federal officials and automakers.

The U.S. Department of Transportation's Pipeline and Hazardous Materials Safety Administration issued a [safety advisory notice](#) in mid-January to the public, repair professionals and used car buyers and owners about the rise in counterfeit and substandard safety devices, such as air bags and other supplemental restraint system components. It indicated that counterfeit parts may contain unapproved explosive charges and construction material and "can cause serious injury or even death in a crash."

U.S. Customs and Border Protection seized more than 211,000 counterfeit automotive parts in fiscal 2024, nearly doubling the number of counterfeit parts seized the previous year.

7 Major Failure Points to Address Before Hitting the Open Road

The Hack Mechanic, Hagerty Media / Articles by Rob Siegel 26 May 2025

Preventive maintenance before a road trip falls into two categories, dealing with the known and forestalling the predictable. Regarding the known, it's foolish to set off on a long trip with a car that has a serious known problem (for example, overheating or stumbling) and simply hope for the best. Regarding the predictable, I've found a short list of things likely to strand a vintage car. I call them the Big Seven: fuel delivery issues, ignition issues, cooling system issues, charging system issues, belts, clutch hydraulics, and ball joints. Other things can certainly fail, but they tend to either do so slowly (e.g., brake pads) or not be fatal to a road trip (e.g., a rusty muffler blows a hole or falls off).

Fuel Delivery

Inspect rubber fuel lines and replace any that are cracked, pillow soft, or rock hard. There should be zero tolerance for fuel leaks. Also think about the fuel pump. Older mechanical fuel pumps can fail slowly over time, pumping less and less fuel, until the car feels like it's running out of gas (because it actually is). In contrast, electric fuel pumps usually fail in a binary fashion; they either work or they don't. Sometimes after sitting, they stick, in which case smacking them can sometimes briefly bring them back to life. But your best bet, if in doubt as to the pump's age and condition, is to replace it before setting off for the open road.

Ignition

Especially on cars that are road-tripped, I'm a big believer in replacing points with electronic breaker-less ignition such as [Pertronix](#). But if you rely on points, be certain to inspect them for pitting and to check point gap/ignition well before a long trip. Inspect the spark plugs and replace them if they have too much carbon; check the inside of the distributor cap for corrosion and cracks; and make sure the plug wires don't have abrasions that can cause them to arc to ground.

Cooling System

As with the fuel hoses, check the **coolant hoses** and replace any that are pillow soft, rock hard, or cracked. If it has been decades since the hoses have been off the car, removing them and scraping the corrosion off the metal coolant necks is a good way to forestall leakage. Inspect the underside of the water pump to check for a coolant trail. Grab a fan blade and rock it fore and aft to check for bearing play. A tiny amount of play is acceptable, but obvious looseness indicates impending bearing or seal failure. If possible, drive the car in temperatures similar to what you expect on the road trip. If it runs hot, the odds are that the radiator isn't up to the task. Upgrading to a higher-capacity radiator before a trip is money well spent.

Charging System

Charging system issues involve the alternator, voltage regulator (which may be internal to the alternator or external), and the wires connecting them to the battery and to ground. When the engine is running, the voltage at the battery should read between 13.5 and 14.2 volts. On vintage cars, it may be a little lower, but if you read battery voltage of 12.6 volts while the engine is running, the alternator is not charging the battery, and the battery will run down and eventually will not have enough juice to fire the coil.

Belts

Pay particular attention to the belts that operate the aforementioned cooling fan and alternator, as breakage or even lack of proper tension in one of those could lead to overheating and/or running down your battery.

Clutch Hydraulics

When clutch hydraulics (the clutch master and slave cylinders) fail, the clutch pedal will go to the floor without causing the clutch plate to separate from the disc, making it impossible to put the car in gear and difficult to shift. Impending failure is sometimes accompanied by visual fluid loss, but not always. If the car is 40–50 years old and running on its original clutch hydraulics, prophylactic replacement is best.

Ball Joints

If these fail, the wheel folds under the front fender and you lose control of the car. While the same loss of control can be said of failure of other steering components like tie rods, the ball joints are the steering components that take the pounding from the suspension and thus are more likely to fail catastrophically. Jacking the car up, setting it on stands, and squeezing the ball joints with a big pair of slip-joint pliers to check for vertical play is essential to ensure a safe trip.

I don't pretend the Big Seven are the only maintenance issues to address. Among other things, I also [take a close look at my tires](#)—namely for signs of dry-rotted rubber—the [brakes](#), and [wheel bearings](#) (with the car on jack stands, grab the wheel at 6 and 12 o'clock and check for play). Of course, you'll want to pay closer attention to your vehicle's fluid levels in the weeks leading up to your journey. Nothing is foolproof.

Welcome to the Michigan Chapter
SOLID AXLE CORVETTE CLUB

Michigan Chapter SACC Membership or Renewal Application - New___ Renewal___ Yr. ___

Michigan Chapter Membership requires membership in the National SACC organization.

For record keeping: MI SACC collects both National and Chapter dues and submits your National dues to SACC National.

	1 year	3 years
Michigan Chapter SACC dues @ \$15.00 a year:	\$15.00.	\$40.00

Solid Axle Corvette Club

The Solid Axle Corvette Club is for enthusiasts who drive and show America's first sports car., our beloved C1's. The Solid Axle Corvette Club invites you to share our enthusiasm and dedication to the Solid Axle Corvettes, and to enjoy the fellowship of our members.

SACC is the initials of the Solid Axle Corvette Club. So, just what is a solid axle Corvette? The rear axle housing on all 1953 to 1962 Corvettes was a one-piece shell. The rear differential (rear gears) and the axles were mounted within this rear axle housing. (The rear axle housing is sometimes called a solid [or straight] axle housing.)

Beginning with the 1963 model year, Corvettes had an independent rear suspension (IRS). The rear differential is built into the center housing: universal joints and short shafts (called jack shafts) transfer power to the rear wheels. Each rear wheel reacts independently to the road surface, and has earned the nickname "rubber axle".

The Solid Axle Corvette Club (SACC) is a non-profit organization dedicated to the preservation, care, history, and enjoyment of the 1953 to 1962 Corvettes. Ours is a family oriented club with membership covering all members of your family. You do not need to own a Corvette to join.

Road Rules

The **Michigan** is the quarterly newsletter for the Michigan Chapter of the Solid Axle Corvette Club and is published four times yearly (Spring, Summer, Fall & Winter). It is published in PDF format, and e-mailed to members in good standing.

Membership in the Michigan Chapter is open **only** to members of the parent organization, the Solid Axle Corvette Club. The Solid Axle Corvette Club is a non-profit organization, serving members with an interest in 1953—1962 model year Corvettes. Ownership of a Solid Axle or any Corvette is not necessary to become a member of the organization.

The newsletter provides a forum for members to communicate with other members. As a result, the newsletter will often contain member opinions. Those opinions should not be construed as an endorsement by Michigan SACC or the parent organization, SACC.

Membership renewal and application form on page 3.

Please submit articles for publication to the editor.

Generally, articles for publication should follow the broad theme of anything of interest to the Solid Axle Corvette community". Suggested items for publication would include how-to articles, parts information, performance issues, scheduled events, restoration or repair information, and personal stories.
